

Digestive System Speed Dating

Your task:

You will be entering a “Speed Dating” activity by visiting a new partner every 4 minutes. During the 4 minute period, you are to randomly choose 1 question from your *partner’s* pile and quiz them on the question. Once you have asked your question, your partner will do the same with your pile.

You are to evaluate in your partner’s answer based on what they have written on their card, and also how they explained their answer to you and vice versa.

Use the following dating evaluation card for your partners. Keep your evaluation card confidential so the grades are honest and accurate. Use the following rubric to help you with your evaluation.

We will try to see each person at least 2 times for the entire cycle.

How you are assessed

Your grade will be the average of all the scores from your peers multiplied by 4 to make it out of 16.

Example:

Mr. Yeung got an average of 3.2 after calculating all the scores from all the partners. The 3.2 will be multiplied by 4 to get 12.8 / 16.
